GZ1GPM85L-05

1.25Gb/s 850nm 550m SFP Transceivers

Features：

- Up to 1.25Gbps data rate
- Duplex LC receptacle optical interface compliant
- Single +3.3V power supply
- Hot-pluggable
- Receiver Loss of Signal Output
- Serial ID module on MOD (0-2)
- International Class 1 laser safety certified
- 850nm VCSEL laser transmitter
- Operating temperature range: 0~+70℃
- Up to 550m transmission distance on 50/125um OM3 MM fiber
- ROHS Compliant

Applications：

- Gigabit Ethernet
- Gigabit Fiber Channel
- Switched backplane applications

Standard:

- Compliant with SFP MSA (INF-8074i)
- Compliant with SFF-8472 v12.2
- Compliant with IEEE802.3z Gigabit Ethernet
- Compliant with FC-PI v2.0

1. Measured with a PRBS 2^{23}-1 test pattern, @1.25Gb/s, EX=10dB, BER<10^{-12}
2. The LOS Hysteresis to minimize "chatter" on the output line. In principle, hysteresis alone does not guarantee chatter-free operation

Notes：

1. TX Fault is open collector/drain output which should be pulled up externally with a 4.7K -10KΩresistor on the host board to supply <VccT+0.3V or VccR+0.3V. When high, this output indicates a laser fault of some kind. Low indicates normal operation. In the low state, the output will be pulled to <0.8V.
2. TX Disable input is used to shut down the laser output per the state table below. It is pulled up within the module with a 4.7-10K resistor.

   Low (0-0.8V): Transmitter on

   Between (0.8V and 2V): Undefined

   High (2.0-VccT): Transmitter Disabled

   Open : Transmitter Disabled

3. Mod-Def 0, 1, 2. These are the module definition pins. They should be pulled up with a 4.7 -10K resistor on the host board to supply less than VccT+0.3V or VccR+0.3V.

   Mod-Def 0 is grounded by the module to indicate that the module is present.

   Mod-Def 1 is clock line of two wire serial interface for optional serial ID.

   Mod-Def 2 is data line of two wire serial interface for optional serial ID.

4. LOS (Loss of signal) is an open collector/drain output which should be pulled up externally with a 4.7-10K resistor on the host board to supply <VccT+0.3V or VccR+0.3V. When high, this output indicates the received optical power is below the worst case receiver sensitivity (as defined by the standard in use). Low indicates normal operation. In the low state, the output will be pulled to <0.8V.
5. RD-/+: These are the differential receiver outputs. They are AC coupled 100Ω differential lines which should be terminated with 100Ω differential at the user SERDES. The AC coupling is done inside the module and thus not required on the host board.
6. VccR and VccT are the receiver and transmitter power supplies. They are defined as 3.3V±5% at the SFP connector pin. The in-rush current will typically be no more than 30Ma above steady state supply current after 500ns.
7. TD-/+: These are the differential transmitter inputs. They are AC coupled differential lines with 100Ω differential termination inside the module. The AC coupling is done inside the module and is thus not required on host board

Warnings

Handing Precautions:

This device is susceptible to damage as a result of electrostatic discharge (ESD). A static free environment is highly recommended. Please follow guidelines according to proper ESD procedures.

Laser Safety:

Radiation emitted by laser devices can be dangerous to human eyes. Avoid eye exposure to direct or indirect radiation.
